Home Gardener Soil Test

Consulting Services by Terra Enviro Consulting, Inc.

What you get:

Complete Soil Testing. A complete analysis allows a look at the total soil fertility picture, which enables the person interpreting the analysis to give better recommendations. Unlike other "consumer" soil tests or soil testing "kits," a complete soil analysis is performed; from the "big three" (nitrogen-N, phosphorus-P and potassium-K) all the way down to the secondary and trace elements (yes, pH is included too!). Further, complete analysis helps with the diagnosis of any problems that may exist due to deficiencies or excesses in plant nutrients.

Thorough recommendations. An interpretation and recommendation on all analyses will be provided to the customer. In addition to recommendations for N, P, and K, all of the plant-essential nutrients will be recommended where needed. Recommendations in layman's terms will explain the amounts of specific products needed.

Experience. Terra Enviro Consulting (TEC) has been working with professional growers for over 30 years on a diversity of crops, from trees and shrubs to turf grass to vegetables to grain and forage crops and more. Helping growers produce more sustainable high quality crops at a lower cost is the very business of what TEC does. What's more, TEC is a member of a professional association of consultants that is over 300 strong worldwide. The association collectively owns the Brookside Laboratories, which is solely in the business of providing cutting edge technology in analyses for their consultant members. The Brookside Laboratories was established in 1951.

Convenience. Just follow the easy to read instructions for sampling and return the sample(s) to this garden store.

All this for just \$35 per sample! Other laboratories charge \$47 to \$60 for the same complete analysis.
